## SPECIFICATIONS

### 1. PICTURE TUBE

Size	: 17 inch
Gun	: In-Line
Deflection Angle	: 90°
Neck Diameter	: 29.1 mm
Phosphor	: P22
Transmission	: 53.5%
Dot Pitch	: 0.26 mm

### 2. SIGNAL

#### 2-1. HORIZONTAL & VERTICAL SYNC

- 1) Input Voltage Level : Low=0-0.4V, High=3.0-5.5V
  - 2) Rise/Fall Time : Max 10nS
  - 3) Over/Under Shoot : Max 10%
  - 4) SYNC. Width : Horizontal=0.8~5uS  
Vertical= 15uS~1mS
  - 5) SYNC. Polarity : Positive or Negative
  - 6) Composite SYNC. Signal  
Vertical SYNC. Width : 1H~10H.  
Serration Pulse : NON, 0.5H, 1H, EX-OR  
Equalize Pulse : 0.25~0.35Vpp
- \* REMARK : H = Horizontal Period

#### 2-2. VIDEO INPUT SIGNAL

- 1) Voltage Level : 0~0.7V
  - A) Color 0, 0 : 0 Vp-p
  - B) Color 7, 0 : 0.467 Vp-p
  - C) Color 15, 0 : 0.7 Vp-p
- 2) Rise/Fall Time : 5nS Max
- 3) Signal Polarity : Positive
- 4) Input Impedance : 75Ohm
- 5) Video Color : R G B ANALOG
- 6) Signal Format : Refer To Timing Chart

#### 2-3. SIGNAL CONNECTOR

15 PIN D-SUB Connector

#### 2-4. SCANNING FREQUENCY

HORIZONTAL	: 30~65kHz
VERTICAL	: 50~120Hz

### 3. POWER SUPPLY (Factory Preset)

#### 3-1. POWER RATING

AC 100~240V, 2.0A MAX. 60/50Hz  
Free Voltage

### 4. DISPLAY AREA

- 4-1. Active Video Area : 300mm X 220mm
- 4-2. Display Color : Full Colors
- 4-3. Display Resolution : 1280 Dots X 1024 Lines
- 4-4. Video Bandwidth : 80MHz

### 5. EXTERNAL CONTROL

- 5-1. Front  
: Power ON/OFF, Brightness, Contrast
- 5-2. Front: (In Door)  
: MODE, UP, DOWN, RECALL, SAVE, DEGAUSS.

### 6. ENVIRONMENT

- 6-1. Operating Temperature: 10° C TO 35° C (Ambient)
- 6-2. Relative Humidity: 8% TO 80% (Noncondensing)
- 6-3. Altitude: 10,000ft

### 7. DIMENSIONS

Width	: 424 mm
Depth	: 480 mm
Height	: 442 mm

### 8. WEIGHT (W/TILT SWIVEL)

Net Weight	: 22.7 Kg
Gross Weight	: 26 Kg

# PREFACE

## SAFETY PRECAUTIONS

### SAFETY-RELATED COMPONENT WARNING!

There are special components used in GoldStar color monitor which are important for safety. These parts are marked (⚠) on the schematic diagram and on the replacement parts list. It is essential that these critical parts should be replaced with the manufacture's specified parts to prevent X-RADIATION, shock, fire or other hazards. Do not modify the original design without obtaining written permission from GoldStar. And this will void the original parts and labor guarantee.

**CAUTION:** No modification of any circuit should be attempted.

Service work should be performed only after you are thoroughly familiar with all of the following safety checks and servicing guidelines.

### SAFETY CHECK

Care should be taken while servicing this color monitor because of the high voltage used in the deflection circuits. These voltages are exposed in such areas as the associated flyback and yoke circuits.

### FIRE & SHOCK HAZARD

- An isolation transformer must be inserted between the color monitor and AC power line before servicing the chassis.
- In servicing, attention must be paid to the original lead dress especially in the high voltage circuit. If a short circuit is found, replace all parts which have been overheated as a result of the short circuit.
- All the protective devices must be reinstalled per original design.
- Soldering must be inspected for the cold solder joints, frayed leads, damaged insulation, solder splashes or the sharp points. Be sure to remove all foreign materials.

### IMPLOSION PROTECTION

All used display tubes are equipped with an integral implosion protection system, but care should be taken to avoid damage and scratching during installation. Use only same type display tubes.

### X-RADIATION

The only potential source of X-Radiation is the picture tube. However, when the high voltage circuitry is operating properly there is no possibility of an X-Radiation problem. The basic precaution which must be exercised is keep the high voltage at the factory-recommended level: the normal high voltage is 26kV and must not exceed 29kV at zero beam current at rated voltage. The following steps describe how to measure the high voltage and how to prevent X-radiation.

**Note:** It is important to use an accurate high voltage meter calibrated periodically.

- To measure the high voltage, use a high impedance high voltage meter. Connect (-) to chassis and (+) to the CRT anode button.
- Turn the brightness control fully clockwise.
- Measure the high Voltage. The high voltage meter should indicate at the factory-recommended level.
- If the upper meter indication exceeds the maximum level, immediate service is required to prevent the possibility of premature component failure.
- To prevent X-Radiation possibility, it is essential to use the specified picture tube.

### CAUTION:

Please use only plastic screwdriver for shock protection during service operation.

## FEATURES

This Color Monitor is a high-quality, high-content Analog Display.

It has the following features:

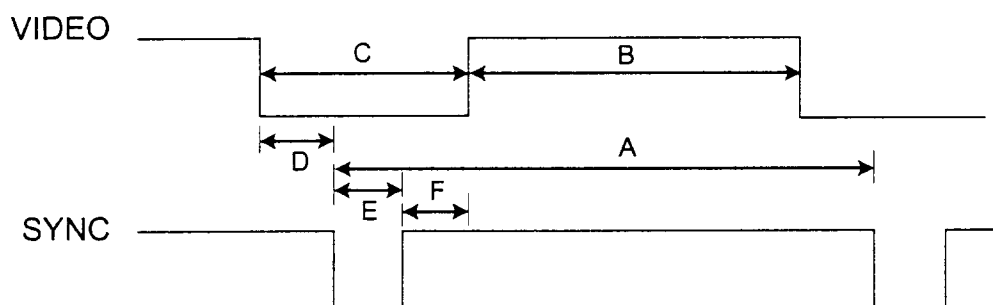

- 17 inch Color Display
- 3 Different, independent lines to drive a RED, a GREEN and a BLUE Line.

- 80MHz Bandwidth.

High-Resolution CDT (Color Display Tube) Display:  
Horizontal 1280 dots, vertical 1024 lines without blurring the characters.

- Analog-Compatibility with a H-frequency of 30-65KHz

## TIMING CHART

## LOCATION and Function of Controls

This high resolution color monitor uses a 15-pin "D" type connector for analog input. Figure 1. Show the monitor controls on the front and rear panels.

**Front View**

**Rear View**

**Figure 1, Controls on the front and rear panels.**

- **Contrast**  
Adjust the Display to the contrast preferred by the user.
- **Brightness**  
Used to adjust the Brightness of the screen.
- **Power Switch**  
Used to turn the power On or Off.
- **Power indicator**  
The power indicator lights when the power is On.
- **AC Power connector**  
Connect to the AC inlet with the supplied AC power cord.

### Digital Control Box

#### 1) Digital control icon

- |                     |                         |
|---------------------|-------------------------|
| Horizontal Position | Side Pincushion         |
| Horizontal Width    | Trapezoid               |
| Vertical Position   | C. T. Color Temperature |
| Vertical Height     |                         |

#### 2) Digital control indicator

When one of the seven digital controls is selected the LED above that digital control icon is lit for indication.

#### 3) MODE button

Push this button for using a microprocessor and selecting an item to be adjusted.

#### 4) UP/DOWN button

Used to set digital values preferred for each of the selected digital control item by pressing the UP button for increment or the DOWN button for decrement.

#### 5) RECALL button

You can recall user preset data for the selected digital control item from the latest preset data by pressing this button.

#### 6) SAVE button

When the display position, size, geometric distortion and color temperature are adjusted as desired, push the SAVE and the MODE button at the same time. And then the all digital control indicators blink 3 times. If this button is not pushed at the same time, Adjusted data is not stored in the memory.

**notes;** When the memory location is full, if the adjusted data is stored for new mode, all digital control indicator is blink 10 times quickly and stored mode in the eighth memory location will be deleted and stored mode in the eight memory location will be deleted and then the new mode data is stored in the thirteenth memory location.

**notes;** The 7 standard display modes of IBM and VESA are factory preset at memory location from 1 to 7, in accordance with GS Ergonomic Rule. therefore, do not adjust these 7 factory preset modes, as possible if, when adjust the one of these 7 factory preset modes as well as add to your special display mode.

You should adjust correctly the geometric distortion with reference as follows and then save the adjusted data.

#### 7) DEGAUSS

In order to eliminate the color impurity. Push in and hold the defaussing switch for a few seconds.

##### 1) pincushion

##### 2) trapezoid

# ADJUSTMENT

## GENERAL INFORMATION

All adjustments are thoroughly checked and corrected. Therefore the monitor should operate normally. The monitor should produce proper color and the picture be on installation.

However, several minor adjustments may be required depending on the particular location which the monitor is to operate. This monitor is shipped in complete carton.

Carefully draw out the monitor from the carton and remove all packing materials.

Check and adjust all the customer controls to obtain a normal picture such as Brightness and Contrast.

## AUTOMATIC DEGAUSSING

A degaussing coil is mounted around the picture tube so that unnecessary magnetism can be degaussed after moving the monitor. The monitor should be properly degaussed upon installation.

If the set is moved or faced in a different direction, wait for a minimum 10 minutes in order that the automatic degaussing circuit may operate properly.

Should the chassis or parts of the cabinet become magnetized to cause poor color faceplate of the picture tube, the sides and front of the monitor, Slowly draw out the coil to a distance of about 2 meters before disconnecting it from the AC source. If color shading still persists, perform the convergence adjustment procedures as mentioned later.

## RASTER CENTER ADJUSTMENT.

1. Display cross-hatch pattern at Mode 7.
2. Turn the brightness volume to the maximum so that the back raster should be visible.
3. Adjust the H-center volume (VR701) so that the center of the raster should be on the mechanical center of the screen.

## FOCUS ADJUSTMENT.

1. Set the Bright VR and Contrast VR to Max.
2. Display "H" character in full screen (color 7,0)
3. Adjust Focus VR of FBT so that the focus should be in best condition.

## B+ / HIGH VOLTAGE / H-HOLD / V-HOLD / X-RAY PROTECTION / V-LIN / WHITE BALANCE / LUMINANCE ADJUSTMENT.

1. Install the cable for adjustment such as Fig 2.
2. Run the program delivered from Goldstar for the special adjustment.
3. Select the item on the screen you want to adjust.
4. Adjust it as the program introduction.

Figure 2, Cable Connection

# "DIGITAL CONTROL BOX"

After pushing the SAVE and the MODE button, the image adjusted by users will be saved into the memory on the monitor CPU. Therefore, when the monitor is powered on again, the image is displayed exactly the same as saved by users.

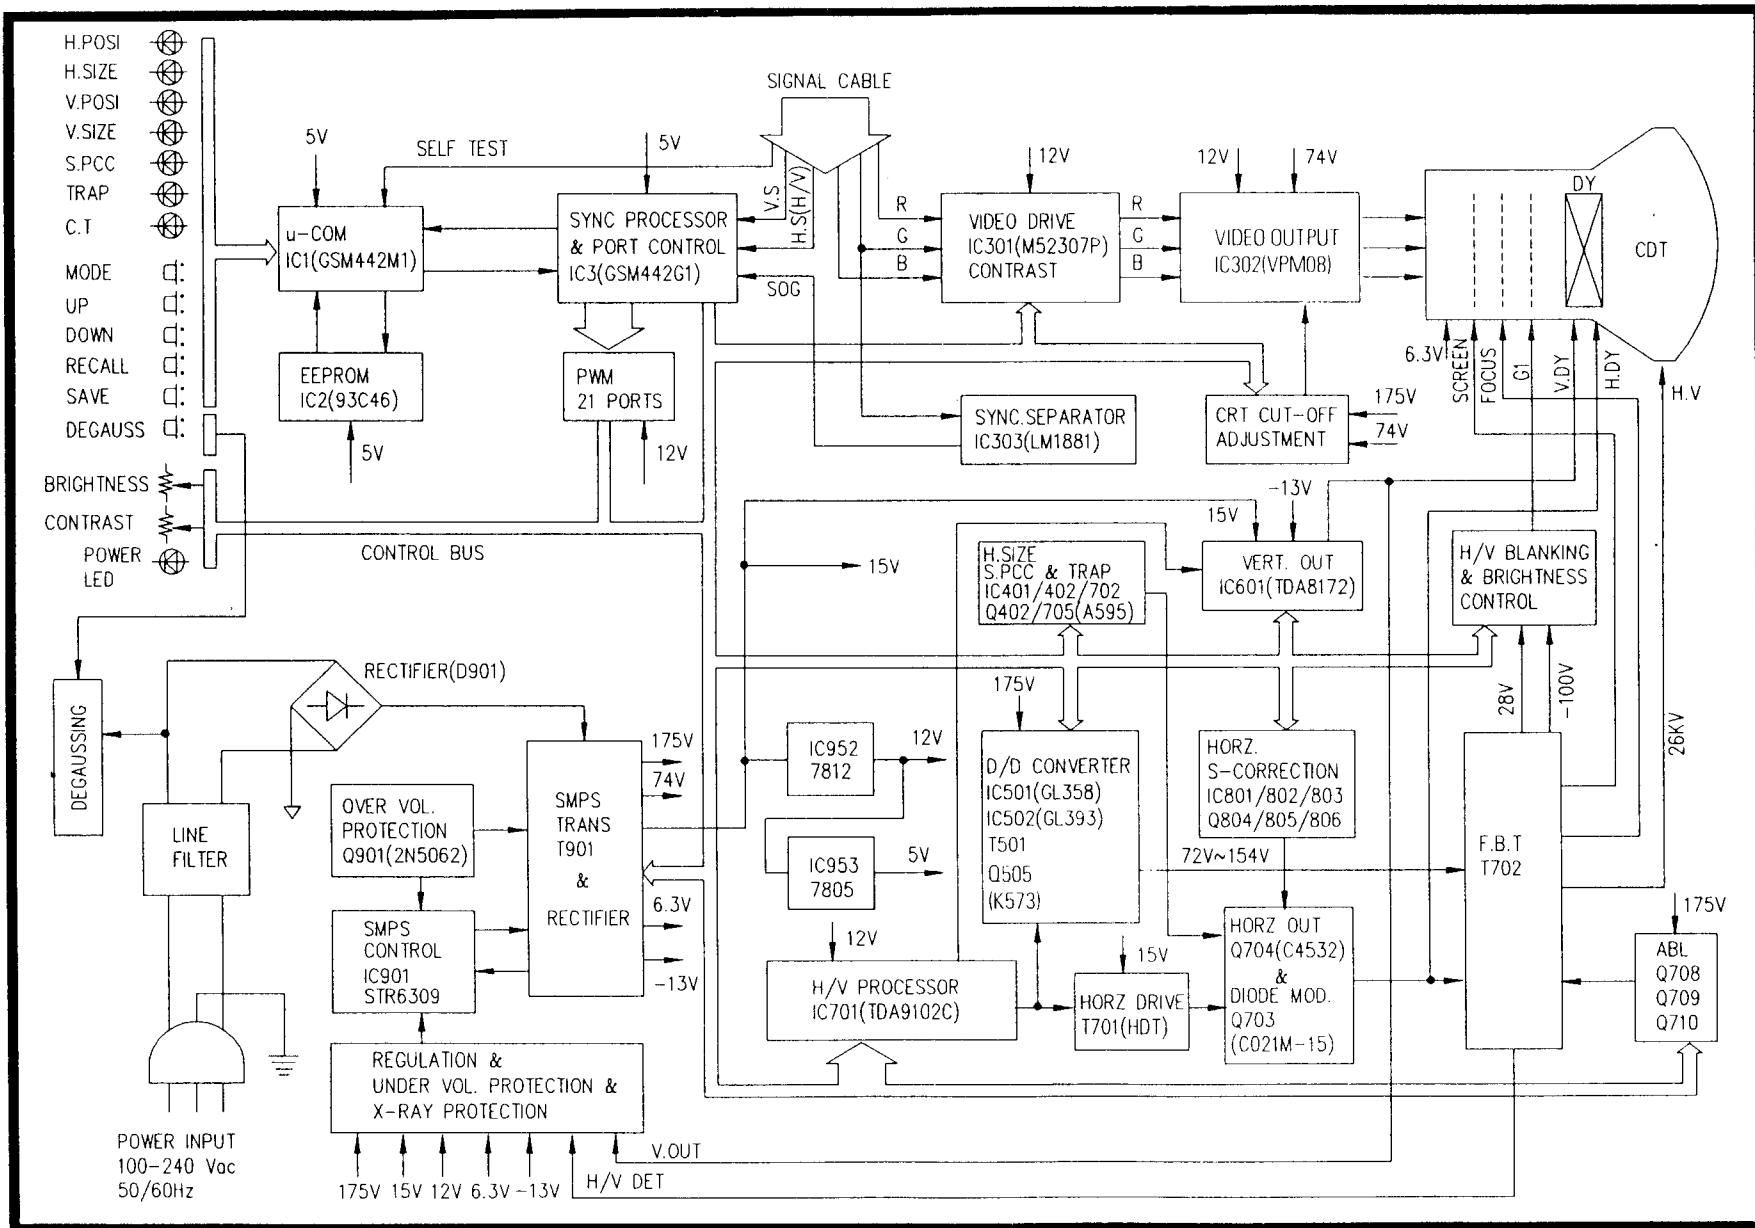

Figure 4,Static Convergence System

1) BLOCK DIAGRAM

BLOCK DIAGRAM

## 2) DESCRIPTION OF BLOCK DIAGRAM

### LINE FILTER

This circuit is used for EMC (Electro-Magnetic Compatibility).

When some noise is generated in this chassis this line filter (L901.902) can reduce interference of noise.

### DEGAUSSING

This circuit consists of degaussing coil and posister.

When power SW is on, this chassis is degaussed automatically.

### SMPS (SWITCHING MODE POWER SUPPLY)

This SMPS covers wide input voltage from AC 100V/60Hz to AC 240V/50Hz.

When the power SW is on, the operating procedure is as follows.

- 1) The AC input voltage is rectified by D901. The rectified DC voltage is supplied to primary of SMSP transformer (T901)
- 2) The control IC (IC901) of SMPS start switching and generate switching pulse.
- 3) The switching pulses of secondary induced from primary coil of T901 are rectified by each rectifier diodes (D951, D952, D953, D954D955) in accordance with turn ratio.
- 4) Each rectified DC voltages (6.3V, 175V, -13V, 15V, 74V) is supplied to secondary circuit.

### UNDER VOLTAGE PROTECTION.

The under voltage protection circuit consists of comparator (IC 101), switching transistor (Q101, 102, 902), photo coupler (IC 902) and the related components. If the output of comparator (IC101) is low level, switching transistor and photo coupler are turned on at the abnormal conditions. Therefore, control IC (IC901) stops operating.

### OVER VOLTAGE PROTECTION.

The over voltage protection circuit consists of zener diode (D906), SCR (Q901) and the related components. If the secondary DC voltage are higher than design value at abnormal condition, the over voltage protection circuit (D906, Q901) is turned on.

And then control IC (IC901) shut down operating.

### X-RAY PROTECTION.

This chassis has high voltage detector in fly back transformer (T702). When the high voltage is reached at 29KV, the primary circuit is stops operating by IC901 and IC101.

### u- COM CONTROL

The operaing procedure of micro processor is as follows.

- 1) The sync signal is supplied to sync processor (IC3).
- 2) The operating mode is discriminated by micro-processor and the operating condition of the monitor is controlled by port controller (IC3) and pulse width modulation.

3) The design value of each mode data is stored at EEPROM (IC2) and read by micro processor.

4) The screen condition can be controlled by users. The controlled data can de stored at EEPROM with MODE, SAVE key.

### HORIZONTAL AND VERTICAL PROCESSOR

H/V processor has sync detector, saw tooth generator and drive function.

### HORIZONTAL DRIVE OUTPUT AND DIODE MODULATION.

This circuit is horizontal deflection amplifier for horizontal raster scan.

### D/D CONVERTER.

This circuit supply variable DC voltage to the fly back transformer and the horizontal output circuit for constant high voltage.

The variable range of DC voltage can vary from 75V to 155V.

### HORIZONTAL S-CORRECTION.

This circuit compensate for horizontal linearity in proportion to horizontal frequency automatically.

### ABL (AUTO BRIGHTNESS LIMIT)

This circuit limits beam current so that beam current may not flow excessively.

### VERTICAL OUTPUT

This circuit is saw tooth amplifier for vertical raster scan.

### H/V BLANKING & BRIGHTNESS CONTROL.

- 1) The blanking circuit cut off the beam current during retrace period horizontal and vertical.
- 2) The brightness is controlled by varying the DC level of cathode ray tube's grid 1.

### VIDEO DRIVE

The video driver (IC301) amplifies the the, R, G, B video signal supplied from PC and the amplified video signal is supplied to the video amp (IC 302), varing the DC level of the contrast control port, the video driver (IC 301) controls the video gain.

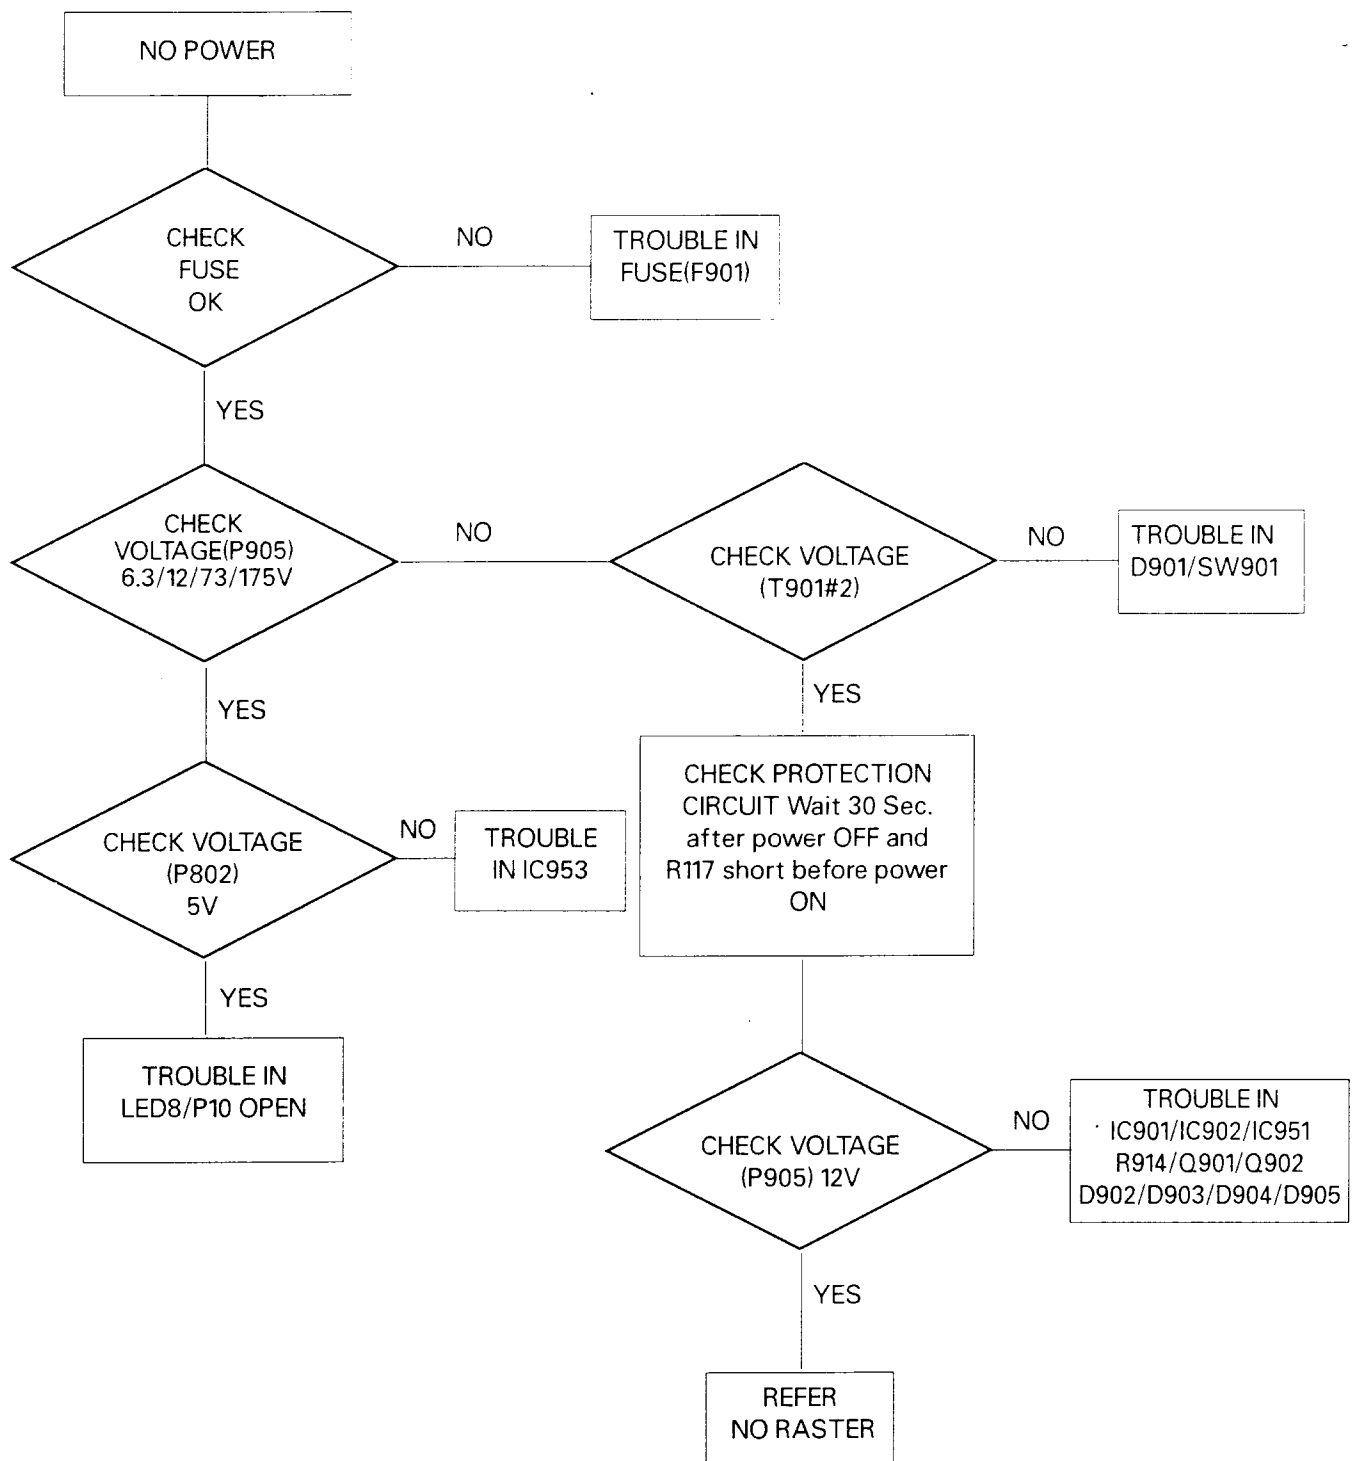

### VIDEO OUTPUT

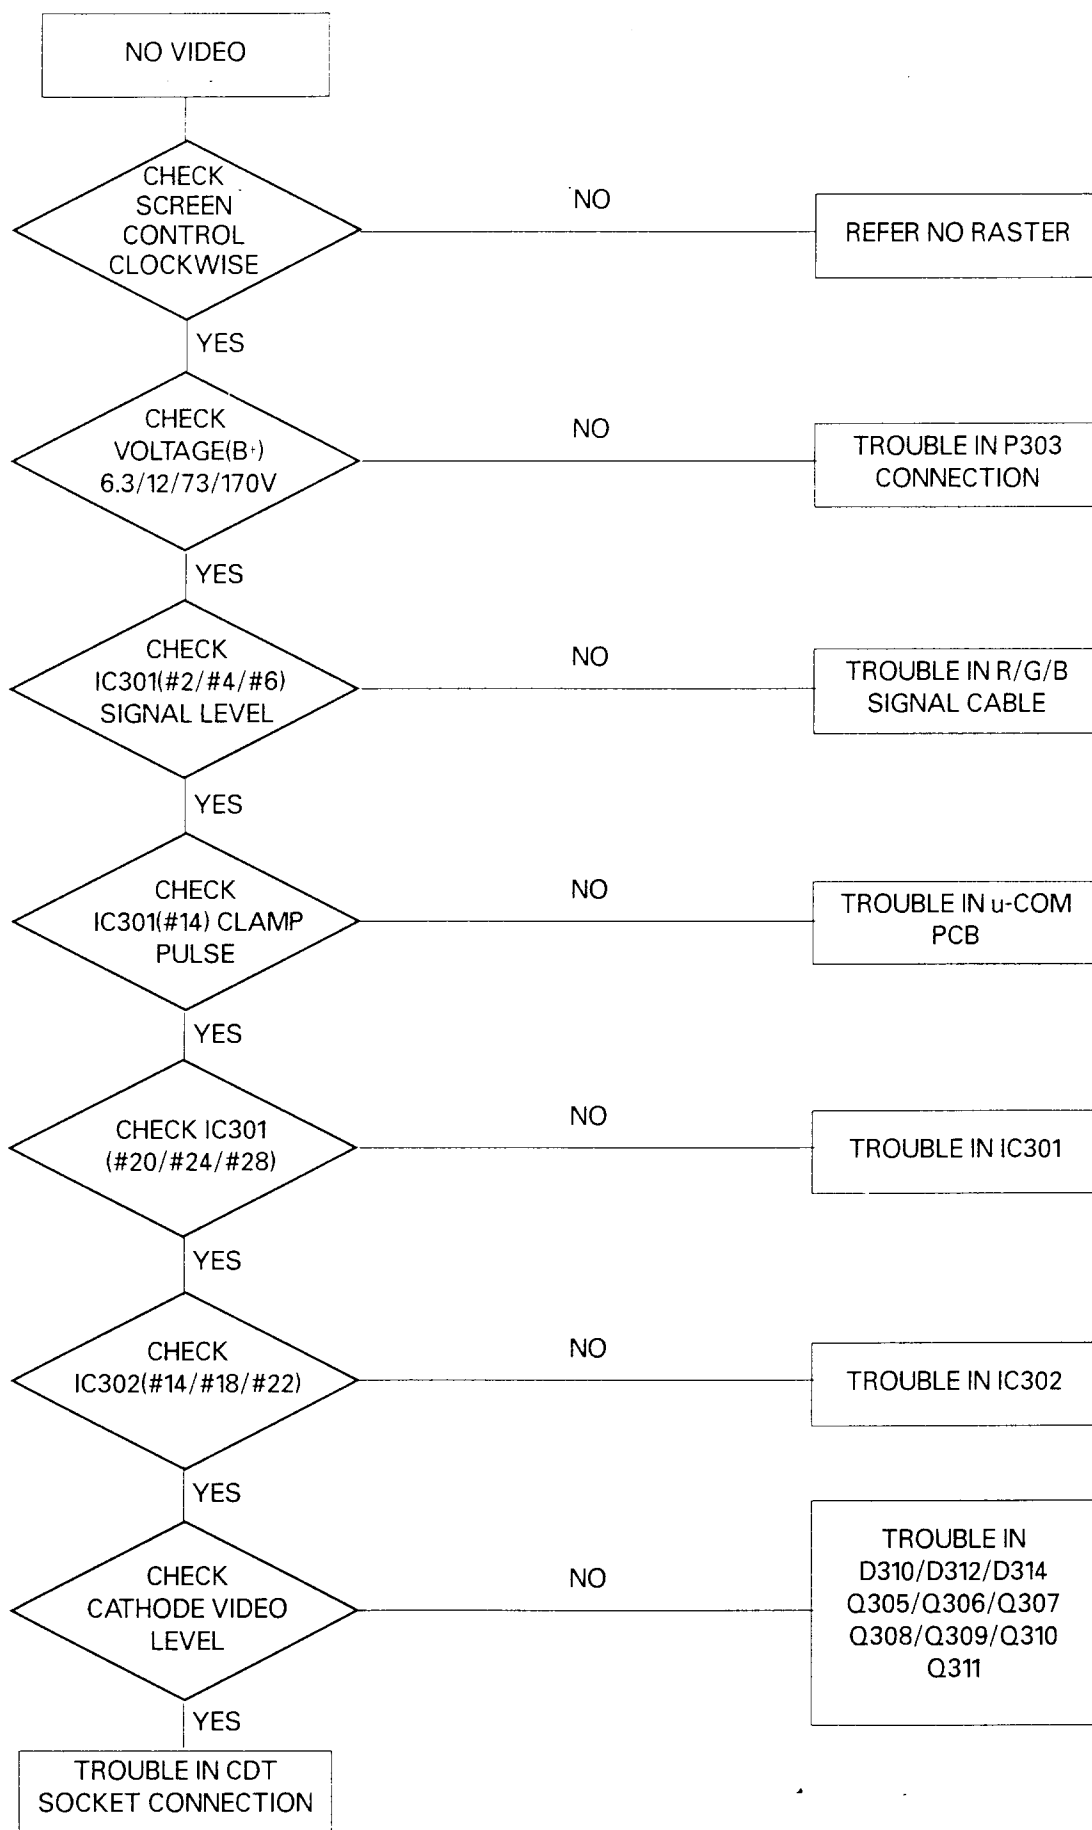

The video signal of each channel is amplified by IC302, each ampcified signal drive dach cathode of CDT.

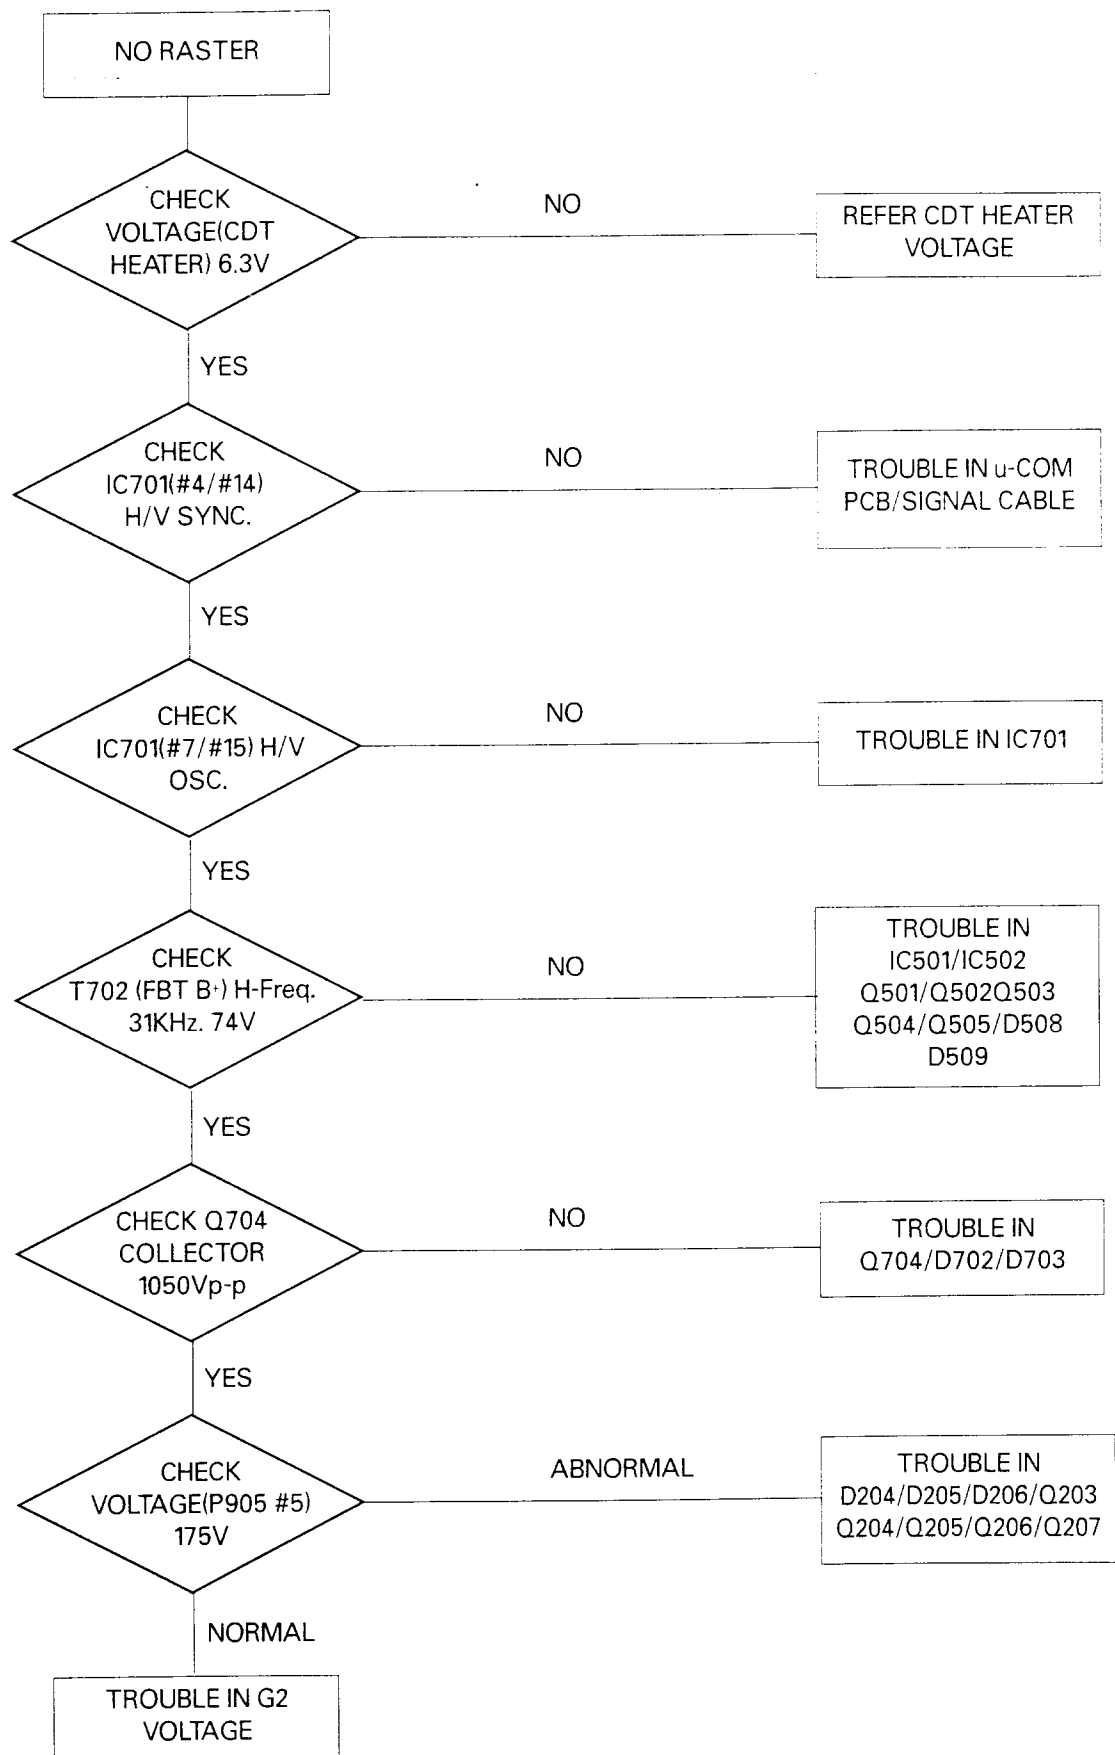

### CDT CUT-OFF ADJUSTEMENT.

This circuit compensate for the voltage variation of each cathode and adjust the white balance of back ground.

## TROUBLE SHOOTING GUIDE

# PRINTED CIRCUIT BOARD

## 1. Main Board (Top Side)

## 2. Main Board (Bottom Side)

### 3. Video Board (Top Side)

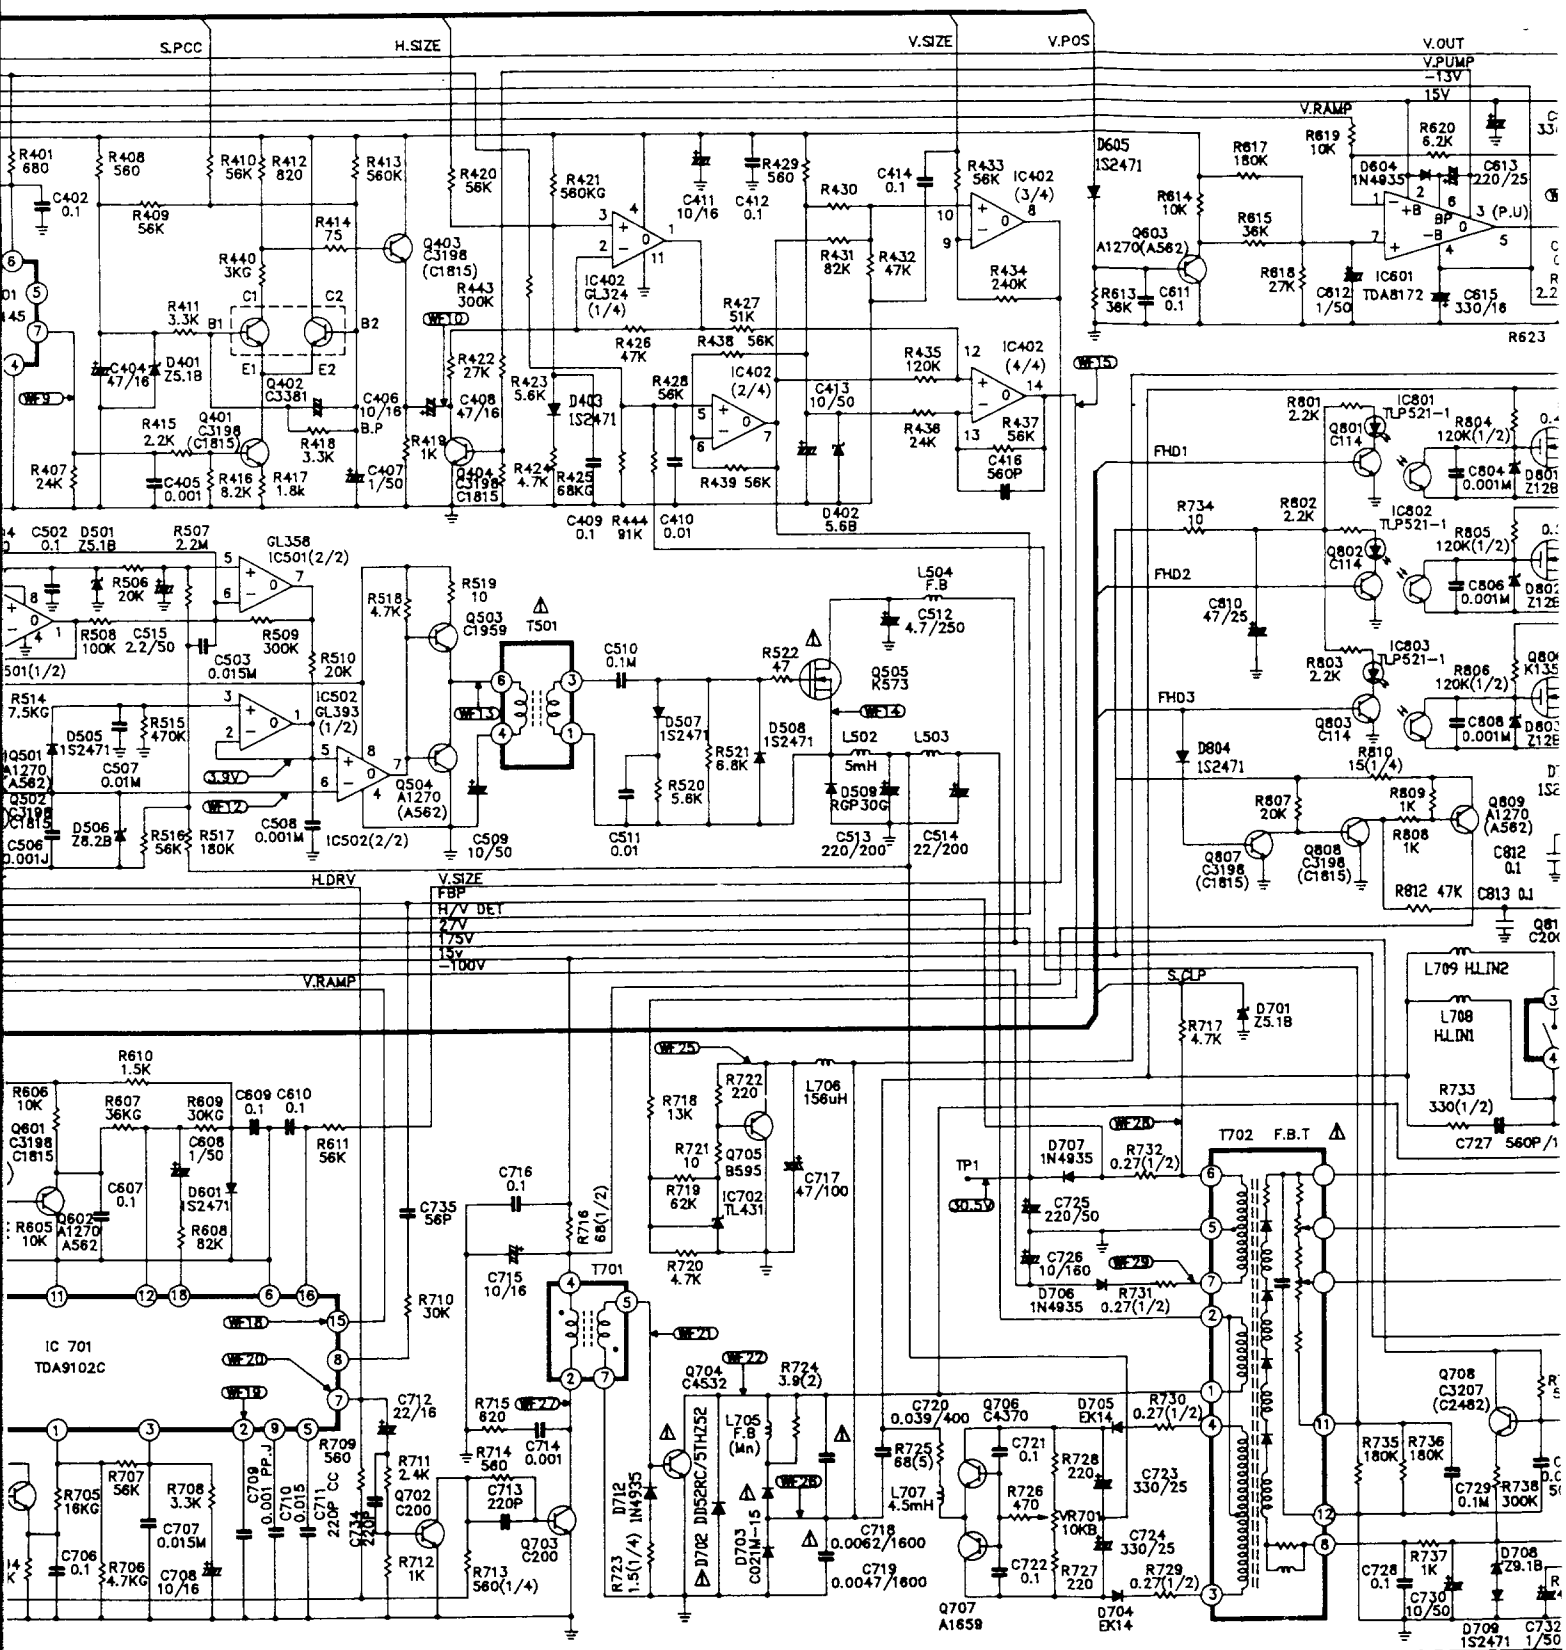

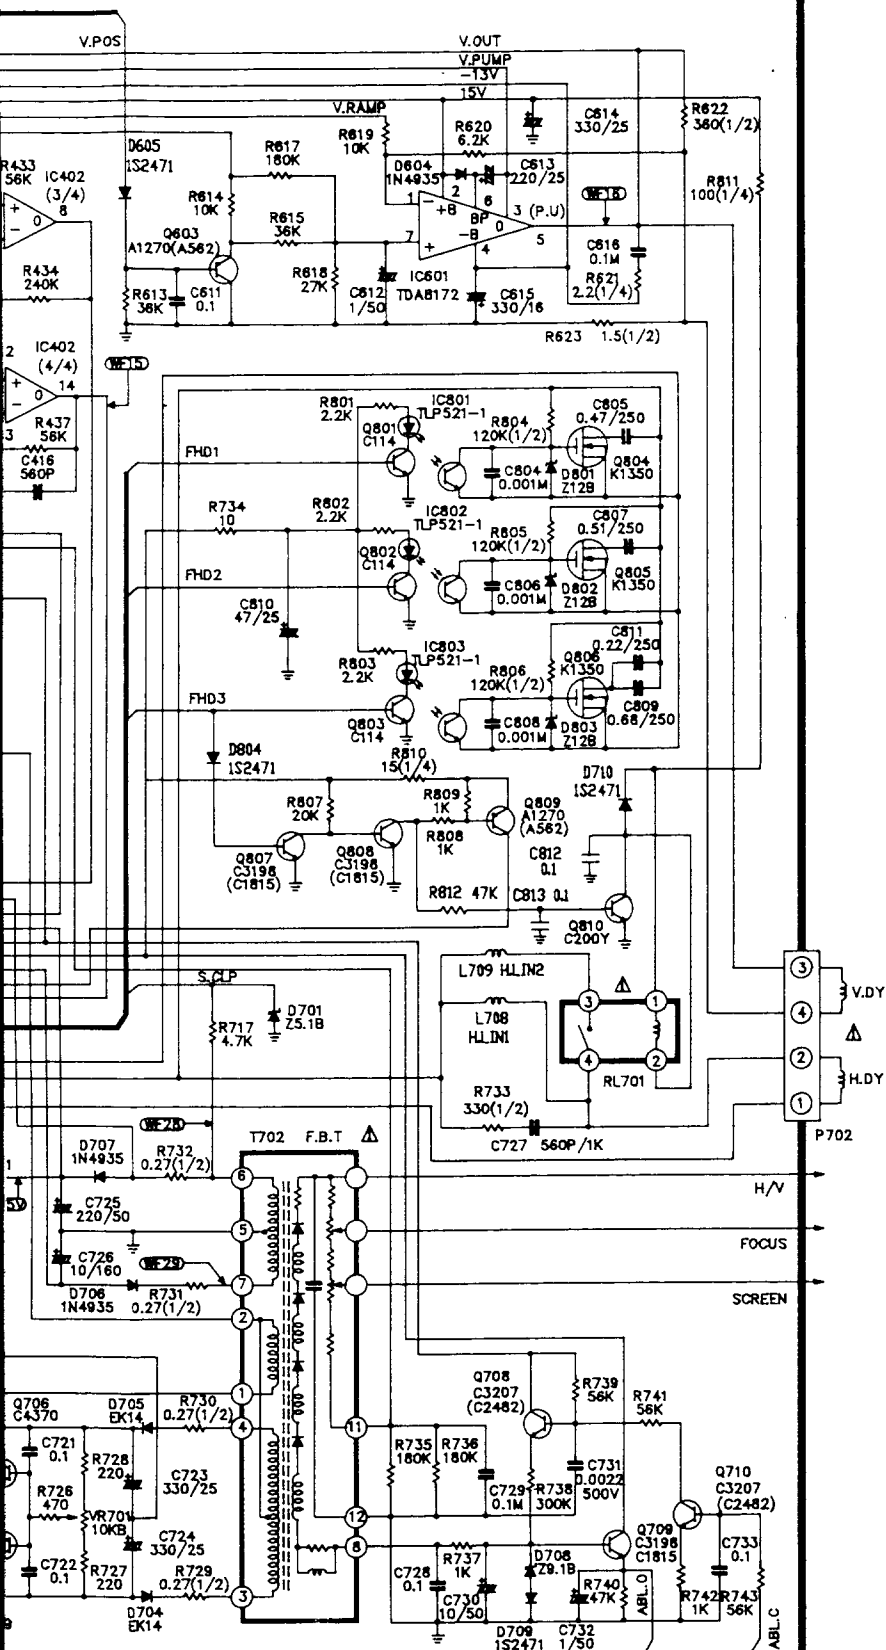

# AGRAM (MAIN)

# NOTES ; UNLESS OTHERWISE SPECIFIED

1. ALL RESISTORS ARE 1/6W, +/- 5 % VALUES IN OHMS  
G = +/- 2 %, K = 1000, M = 1000000
2. ALL CAPACITORS ARE SHOWN IN uF, p = 10E-12F
3. ALL POINT VOLTAGE ARE DC VOLTAGE

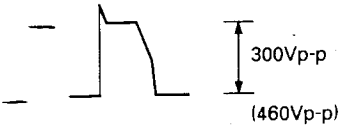

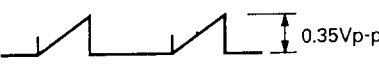

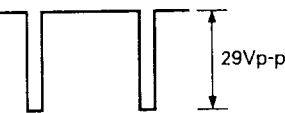

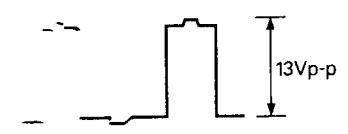

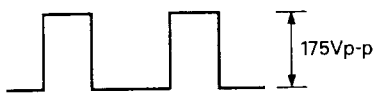

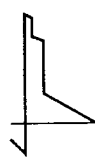

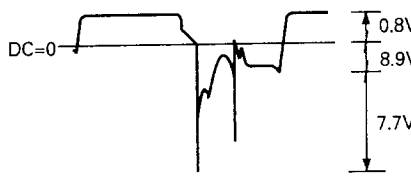

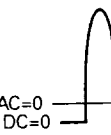

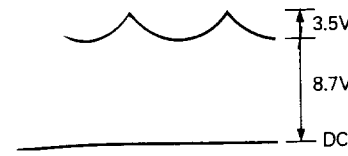

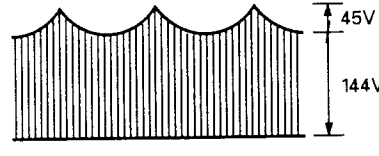

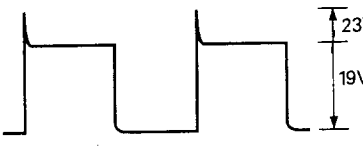

## IMPORTANT SAFETY NOTICE

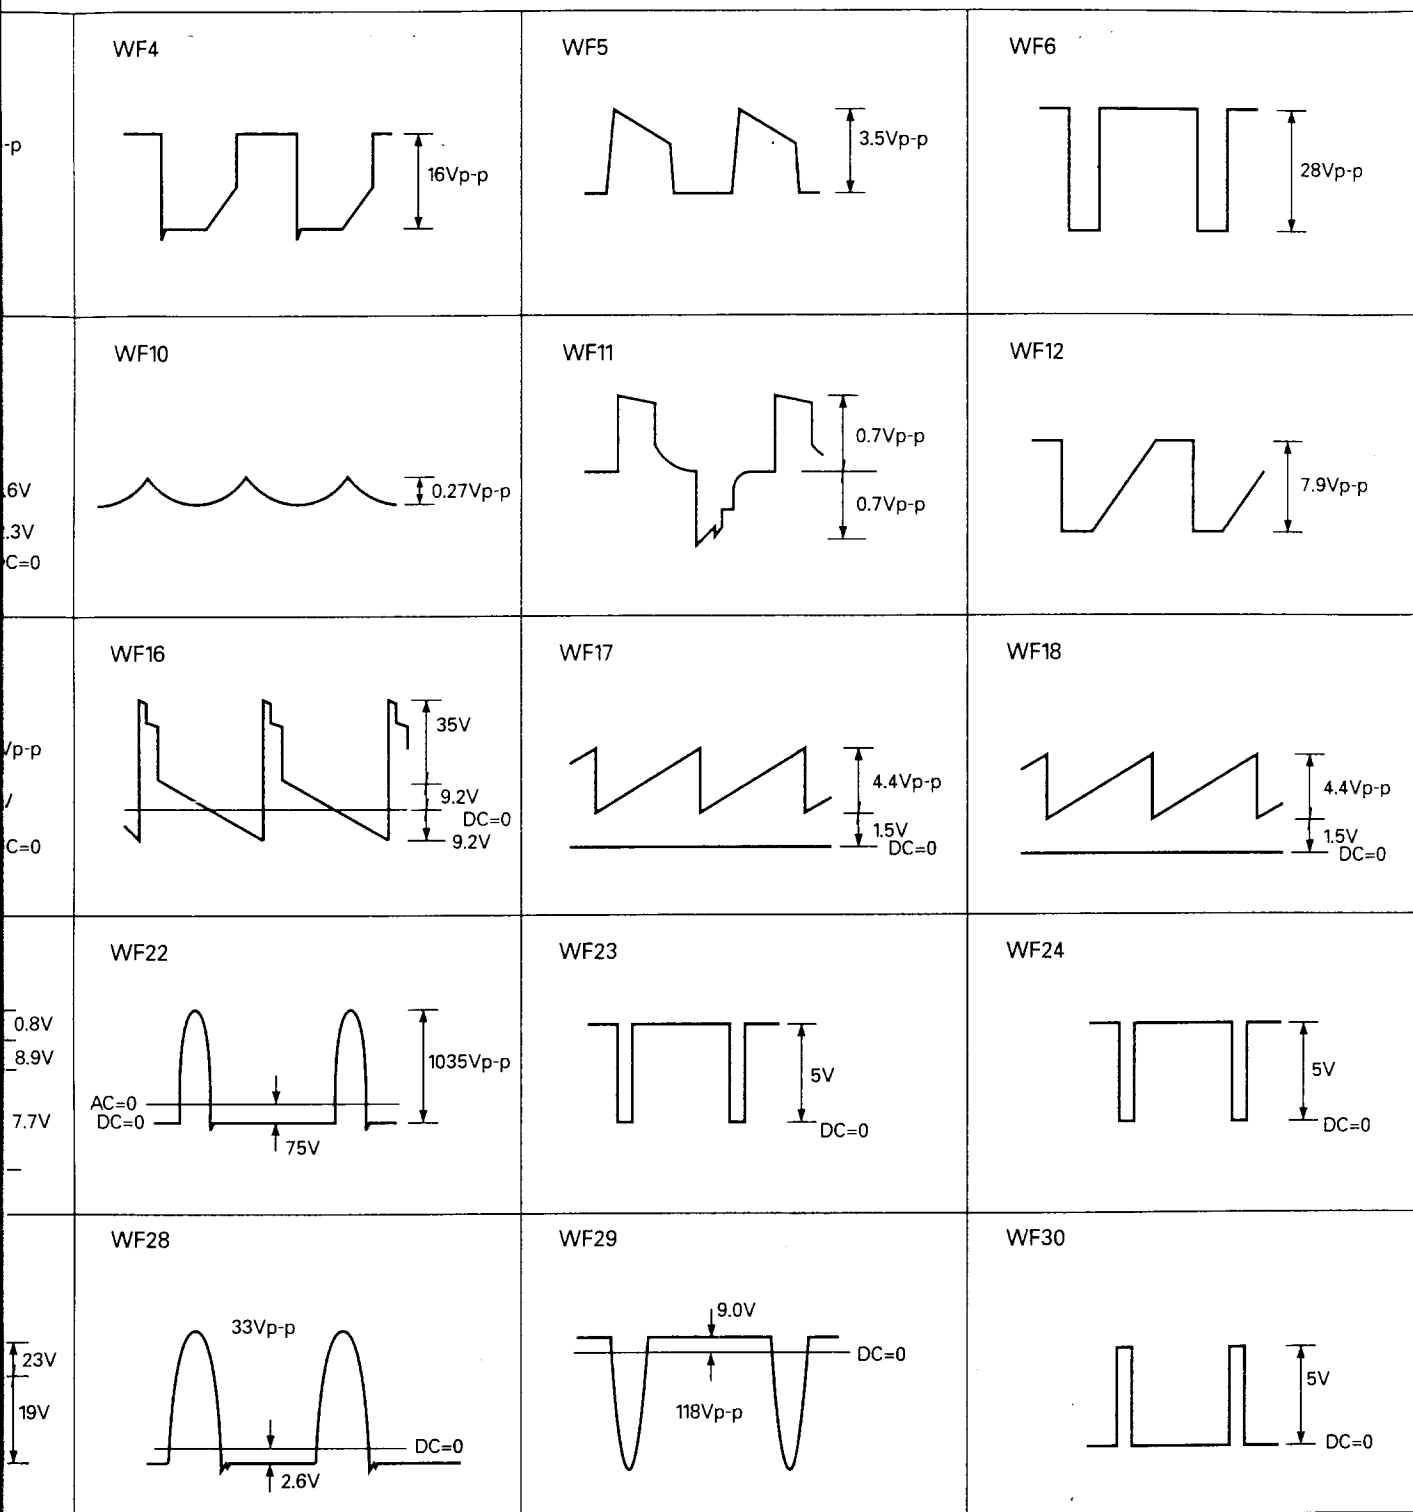

THE  SYMBOL MARK OF THIS SCHEMATIC DIAGRAM INCORPORATES SPECIAL FEATURES IMPORTANT FOR PROTECTION FROM X-RADIATION, FIRE AND ELECTRICAL SHOCK HAZARDS, WHEN SERVICING IT IS ESSENTIAL THAT ONLY MANUFACTURER'S SPECIFIED PARTS BE USED FOR THE CRITICAL COMPONENTS IN THE  SYMBOL MARK OF THE SCHEMATIC.

## IMPORTANT AVIS SUR LA SÉCURITÉ

LA  SYMBOLE MARQUE DE CE DIAGRAMME SCHEMATIQUE COMPREND D'IMPORTANTES CARACTÉRISTIQUES SPÉCIALES CONÇUES POUR PROTÉGER DES RAYONS X, ET DES DANGERS D'INCENDIE ET DE SECOURS ÉLECTRIQUES. EN CAS DE BESOIN SI DES PIÈCES DE CETTE  SYMBOLE MARQUE DOIVENT ÊTRE REMPLACÉES N'UTILISEZ QUE DES PIÈCES SPÉCIFIÉES PAR LE MANUFACTURIER.

# REPLACEMENT PARTS LIST

**CAUTION:** Before replacing any these components, read carefully the "SAFETY PRECAUTION" on page 3.  
Do not degrade the safety of the receiver through improper servicing.

**ABBREVIATIONS:** Capacitors ..... CC : Ceramic (TC), CE : Chemical, CK : Ceramic (Hi-K)  
MPP(BUP) : Metalized Polypropylen, BP : Bipolar, CQ: Mylar  
PE : Polyester PP : Polypropylene  
Resistor ..... RD : Carbon Film, RS : Metal Oxide Film,  
RN : Metal Film, RV : Variable, RF : Fusing, SR : Semifix  
(All CC and Plastic Capacitors are  $\pm 5\%$ , 50 Volts and all resistor,  $\pm 5\%$ , 1/8W unless otherwise noted).  
**S** : Recommend Service, **R** : Replacement Service Parts.
